- Scheduling Messages
- Data Processing & Reporting

It's more than a message

Connecting via effective communication methods is vital for any business, thus, the need for organisations to utilise modern SMS gateways to communicate with stakeholders.

Negete's SMS Plus revolutionises the way SMS services can be used to relay information between you and your stakeholders. SMS Plus is a web-based application that facilitates two-way communication between the backend (office) users and mobile users. It can be the most cost effective and quickest way to receive market information, progress updates, target achievements and survey results while transmitting bulk messages.

SMS Plus comes in two modules; the TM module allows the backend system to transmit messages to field staff or customers and the RM module can be used to gather market data and compile it into meaningful information that can be extracted using the backend reporting system.

Using the TM module organisations can import and group contacts so that scheduled customised SMSs could be sent accordingly to the target audience. The module can also be used to communicate information such as discount/ promotion information, task list, changes to route plans etc. to field staff/ customers as necessary.

The RM module can be used for the purpose of receiving sales data via SMSs. Sales Reps can use their mobile phones to SMS a summary of their sales information to

the provided number in a predefined format. This data is then sent and stored on cloud from where the data can be recalled and converted into the necessary information and viewed via the backend system.

The module can also be used to carry out surveys amongst customers or field staff as well as receive leave notifications from field staff. Based on the data, office users will be able to generate the necessary filtered reports via the backend system.

Negete offers an easy to set up SMS account and a plan that can be customised to suit your requirements using technology that is reliable and easy to use.

SMS Plus Benefits:

- Easy implementation
- Low cost solution
- Effective medium
- No infrastructure and device expenses

HEAR WHAT OUR CLIENTS HAVE TO SAY

"As I searched for the ideal offshoring service provider related to mobile technologies, I found Negete to be my best bet. Their enthusiasm, entrepreneurial spirit and optimism are infectious. They were able to provide excellent guidance and the transition has gone smoothly. I also noted that their knowledge in the field of mobile technologies to be impeccable. I would highly recommend Negete to any company that wants to outsource their mobile developments."

Brian Amit - CEO
Peercore IT - Melbourne, Australia

"We have been on the lookout for a mobile technology service provider that was forward thinking, quick to react and of course, should have the drive to push us well ahead of our competition. We are pleased that we found all these qualities and much more since our affiliation with Negete. Our new mobile website is an excellent demonstration of Negete's leading edge creation. Their focused and meticulous approach and continuous interaction has improved our online presence tremendously."
